VAAYUSIGHTS

THE INTELLIGENT EYE FROM ABOVE

AERIAL-DATA ANALYSIS FOR HIGH-VALUE ASSETS

Send us drone imagery — yours, your operator's, or a capture we arrange — and we return ranked defects, digital twins, volumetrics and reports you can act on. We also clean solar arrays, façades and structures with our own drone crews.

SEE · SENSE · ANALYZE · PREVENT

WHAT WE DO

The core of the practice. These run on imagery from any source — no capture of ours required.

AI Imagery Analysis

Computer vision surfaces anomalies, hotspots and defects across thousands of frames in minutes, every finding reviewed by an engineer.

Digital Twins

Photorealistic 3D reconstructions and point clouds — a measurable model of the asset you inspect from your desk.

Analytics & Reporting

Trends across repeat surveys: how defects, volumes and site progress move over time, in decision-ready reports.

AI/ML Data Annotation

Expert-labelled training data for detection, classification and segmentation — for your models or ours.

ALONGSIDE IT

When you need the capture too. Flights are run by vetted partner operators we scope and brief; cleaning crews are our own.

Visual Inspection

RGB survey of solar farms, turbines, towers, pipelines and roofs — at height, with nothing shut down.

Thermal Inspection

Radiometric imaging that pinpoints faulty modules, overheating joints and insulation loss before they turn into failures.

Mapping & Surveying

Orthomosaics, contours and volumetrics to survey grade, flown with RTK and ground control.

Aerial Cleaning

Drone cleaning of solar arrays, façades, roofs, silos and industrial structures, run by our own crews. No scaffolding, no roof access.

WHY IT WORKS

- Your existing imagery is enough to start
- No production shutdown to inspect
- Findings ranked, not just listed
- Repeat surveys make change measurable

SECTORS

- Renewable energy — solar & wind
- Infrastructure — roads, bridges, towers
- Industrial — plants, utilities, yards
- Commercial — real estate & enterprise
